THIS IS
DUKE ENERGY’S
LEGACY IN
NORTH CAROLINA.

Duke’s coal ash waste has been a serious problem for North Carolina for decades. Recently, Duke Energy spilled 82,000 tons of coal ash loaded with arsenic into the Dan River. In spite of the clear risks, Duke still stores wet coal ash in 13 other sites across the state. Duke Energy CEO Lynn Good must take responsibility and clean up these dangerous coal ash lagoons. North Carolina’s people and environment can’t afford more spills and more contamination. It’s time to clean up the coal ash for good.

Visit sc.org/DukeCoalAsh to learn more and take action.
