Tell the Agency that Duke Energy’s Asheville coal plant must protect the public’s health!

Air Quality Public Hearing
Wednesday, April 29
6:00pm
Erwin High School auditorium
60 Lees Creek Rd, Asheville

For years, Duke Energy’s Asheville coal plant has been causing unsafe levels of sulfur dioxide (SO2), a lung irritant that triggers asthma attacks and airway constrictions. The WNC Regional Air Quality Agency is proposing a new pollution permit that keeps the same inadequate numeric emission limit for SO2. The proposed limit is 80 times what is necessary to ensure the safety of communities downwind of the plant.
