The City of Holland needs to lead West Michigan into a clean energy future. Clean and renewable sources of energy are creating jobs and injecting more than $100 million of investment into Michigan’s economy. The future for Holland is not in old, dirty energy but in new, clean sources of energy like wind that can put people back to work right here at home, reduce energy bills for homeowners, and minimize the threats posed by old and dirty fossil fuels. It’s time for our leaders to listen to Holland residents and move us toward a clean energy future.
