DO YOU WANT A CLEAN ENERGY FUTURE FOR ASHEVILLE?
To Jim Rogers, CEO of Duke Energy:

Please take the lead in creating a clean energy future in western North Carolina.

Here in Asheville, our community is at risk from the pollution coming from the Asheville Coal Plant and the two coal-ash sites that loom over I-26 and the French Broad River. The Environmental Protection Agency classifies the dams as a high hazard because if they break, it will result in the loss of life.

I am concerned that old, polluting technology like coal poses risks to our community’s health and well-being. Further, mountaintop-removal mined coal, which feeds the plant, destroys the land, water and homes of people in Appalachia.

Asheville is working hard to become a clean and healthy city, but relying on coal prevents us from investing in a clean energy future. Please work with us to protect our health and the environment by replacing the coal plant with clean energy solutions and by cleaning up the toxic coal ash ponds in Asheville.
