Dear Chairman Howard Steinberg
and COO Michael Hervey,

The current process requesting proposals for new power generation for Long Island is an exciting opportunity to make clean, renewable energy like offshore wind a reality for New York. Investing in offshore wind instead of massive new dirty energy projects will mean cleaner air, healthier communities, new jobs and stable electricity prices for families and businesses on Long Island.

I urge you to use this opportunity to bring clean, renewable energy to Long Island and not lock us in to long-term new dirty energy projects. I want New York to be a clean energy leader. We’ve never had a better opportunity to make that happen than your current power generation proposal process. Choosing clean, renewable energy like offshore wind will not only show that LIPA is an innovative, forward-thinking power authority, but will yield healthier, happier customers who know that together we’re building a better future for our children.

Sincerely,

Chairman Howard E. Steinberg
Chief Operating Officer Michael Hervey
