Nebraska blows away all our neighboring states in wind potential, but we come dead last when it comes to wind energy development. Right now, Nebraska public power is hooked on outdated fuels like coal, and it’s costing us.

Our neighbors in Iowa draw ten times more power from wind energy than Nebraska while enjoying lower electricity rates. If Nebraska doesn’t invest in clean energy, we’ll continue to lose out on big economic opportunities from cutting-edge businesses like Facebook and Google.

Investing in wind energy will bring thousands of new jobs to Nebraska, keeping our rates competitive with our neighbors while reducing air and water pollution.

It’s time to grow our economy and open the door to local wind energy. It’s time to get Nebraska in the game.
