TVA is making decisions on the future of the Allen coal-burning power plant right now. This urgent issue requires immediate action in our community.

THE PROBLEM
TVA wants to spend more of your money to keep the fifty year old Allen coal-burning power plant running for decades to come. The Allen plant is the biggest toxic polluter in Shelby County, and letting it run into the future means more health-threatening toxins will be spewed into our air every day.

Shelby County already has some of the worst air quality in the region. Air pollution levels here exceed safety limits set by the U.S. Environmental Protection Agency.

The best path forward is replacing the Allen coal-burning plant with energy efficiency and clean renewable energy sources, like wind and solar. Investments in these clean energy technologies will protect the health of our families, lower energy bills, create high-paying jobs, and create new economic opportunities in our region.

WHAT YOU CAN DO
Join our team! We’re building a broad clean energy coalition to tell TVA that we want energy options that save lives and grow our economy. You can make a difference in our community by getting involved. Help us write letters to key decision makers about the future of the Allen coal-fired power plant or host a meeting at your home or business to talk about clean energy solutions for our community.
