CAN GE REALLY BE “GREEN” IF THEY OWN THE NATION’S DIRTIEST POWER PLANT?
GENERAL ELECTRIC WANTS YOU TO BELIEVE THAT IT’S AN ENVIRONMENTALLY FRIENDLY CORPORATION.

BUT GE HAS A DIRTY SECRET.

GE owns the dirtiest coal-fired power plant in the entire country — the Homer City Generating Station, which emitted the most sulfur dioxide of any plant in the U.S. in 2010. Sulfur dioxide causes heart attacks, respiratory illness and asthma attacks.

Now GE wants to make sure this old, dangerous plant keeps polluting Pennsylvania for decades to come. It’s time to tell GE: close down the Homer City coal plant.
