It’s time for the Public Service Electric and Gas Company to retire the old, dirty Bridgeport Coal Plant. We can transition to a cleaner, healthier future for Bridgeport with jobs in new industries like clean, renewable wind and solar energy, and Governor Malloy can help us make it happen. The Governor has the ability to protect our communities and our children’s health by working towards a responsible retirement for the Bridgeport Coal Plant. It’s time for Connecticut to stand together for a clean, safe and reliable energy future.

**BRIDGEPORT COAL PLANT:**

- Bridgeport is an outdated 44 year old plant that lacks the proper pollution safeguards. It’s a major source of soot, smog and climate disrupting pollution.
- 14.9% of school-aged kids in the Bridgeport school district have asthma, higher than the national average.
- Fairfield County has one of the highest asthma rates in CT. In fact, in just one year 318 people were hospitalized for asthma in Bridgeport.
- Coal is the #1 source of mercury pollution and a leading trigger of asthma attacks; 1 in 10 kids in America suffers from asthma.
- Pollution from coal fired power plants contributes to four of the five leading causes of death in the U.S. costing Americans $100 billion in health costs every year.

**Call Governor Malloy and ask him to support making CT coal-free by retiring the Bridgeport Coal Plant and building a clean energy future. 1-800-406-1527**
