The Time is Right to
MOVE LAKELAND BEYOND COAL
Lakeland Electric’s C.D. McIntosh coal-fired power plant is outdated, expensive and polluting and should be phased out for the health of our community and economy.

A recent Lakeland Ledger editorial stated that McIntosh’s Unit 3 is not only hitting ratepayers in our collective wallets, but that the coal plant’s demise “may only be a matter of time regardless of the cause. Thus, we must begin planning accordingly.”*

The Lakeland City Commission has the power to direct Lakeland Electric to invest more in clean, renewable energy and retire the dirty coal-fired power plant. Doing so will protect our air, water, and climate and could lower our power bills, too.
