Powering our homes, churches, and businesses with clean energy means less of the harmful pollution from fossil fuels that makes our families sick.

That’s why I’m thanking Senator McCaskill for voting against an extreme attack on the U.S. Environmental Protection Agency’s Clean Power Plan: so communities like ours can cut dangerous carbon pollution, strengthen our economy with clean energy jobs, and breathe easier.

Because our choices for power should be sources of power.

From the pulpit to the panels capturing solar energy on our church’s roof, my community is serious about power for its people.
