LET’S PUT MINNESOTA ON A PATH BEYOND FOSSIL FUELS TO 100% RENEWABLE ENERGY!
Minnesota needs a racially and economically just path to 100% renewable energy! We need to ensure that all Minnesotans see the benefits of a shift to renewable energy: including communities of color and low-income communities that have been disproportionately impacted by fossil fuel pollution, as well as communities that have or will be economically impacted by a transition away from fossil fuels.

Renewable energy has created tens of thousands of jobs, reduced pollution, and saved Minnesotans money on energy bills. Minnesota must continue its leadership on a path to 100% renewable energy.

Dear Governor Dayton,

Minnesota needs a plan to move beyond fossil fuels to 100% renewable energy!

Moving to 100% renewable energy protects our health, air and water, and invests in MN’s clean energy economy. MN’s plan must make sure that everyone sees these benefits; including communities of color and low-income communities that have been disproportionately impacted by fossil fuel pollution, and communities that have or will be economically impacted by a transition away from fossil fuels.

Renewable energy has created tens of thousands of jobs, reduced pollution, and saved Minnesotans money on energy bills. Minnesota must continue its leadership on a path to 100% renewable energy.
